

F-6 ALLISON TRANSMISSIONS

This course covers the servicing and maintenance, diagnostics and troubleshooting of Allison Transmissions
HT740, 1000, 2000, 3000, 4000 series

OVERVIEW

This course is an EVT F-6 Allison Transmission class that covers: Transmission identification, torque converter theory, operation and troubleshooting, clutches, hydraulics, electronic controls & prognostics, output retarders, pump mode operation, driveline troubleshooting, and data link operation. Including servicing and maintenance, diagnostics, and troubleshooting of Allison Transmissions: **HT740, 1000, 2000, 3000 and 4000 found in fire trucks and emergency vehicles.** For emergency responders, failure is not an option. Allison Transmission has spent decades designing and building transmissions that perform at their best in critical situations.

A sound vehicle and maintenance and testing program are important to government agencies of all sizes. That's why understanding proper Allison Transmission maintenance, diagnosing, and testing are so important.

COST

\$500 per person
Includes 1-year FDSOA membership
